

COVID-19 Lockdown Staff Survey Report

University of Reading

COVID-19 Lockdown Staff Survey RAG Report – Sub-Group Analysis July 2020

Project Number: 8529

University of Reading Internal Use Only

Organisational Contact Information

Address:

Capita Surveys and Research Spa House Hookstone Park Harrogate North Yorkshire HG2 7DB

Tel: 01423 818700

Web: www.capitasurveys.co.uk

This report is produced for internal use within the University of Reading only. It is not authorised for distribution or publication outside of University of Reading.

Surveys designed from the basis of the Capita HEI COVID-19 Response framework are for single-use and questionnaires may not be used by any other party.

Capita shall retain ownership of any Intellectual Property Rights created or generated by it in connection with this survey.

This report should not be used in response to a Freedom of Information Act request without prior consultation with Capita.

Background

Like many other employment sectors within the UK, the Higher Education sector has been strongly affected by the Coronavirus outbreak and social distancing controls put in place by the UK Government to tackle the spread and protect NHS resources at this time.

With such a wide range of job roles within the University, there has not been a one-size-fits all approach to lockdown, and while small numbers of staff have been required to continue to work on campus, many have been working from home. Some roles simply cannot be undertaken remotely, and some staff have been 'furloughed' through the UK government's Coronavirus Job Retention Scheme. The graphic below provides a summary of the timeline of the progression of the virus and government responses, resulting in 'lockdown' from 23rd March 2020.

The University Executive Board and Leadership Group commissioned a survey of staff to explore their experiences of the 'lockdown' period, especially communication and support from the University and the specific School or department they are employed within. Many of the questions asked in this survey match those being asked in other HEIs, while some have been tailored to suit the University of Reading. It is noted that this survey does not cover use of technology, such as Teams, while working at a distance from colleagues, as this will be addressed in a separate exercise being led internally by DTS.

Personalised email invitations to the online survey were distributed during the late afternoon of Thursday 18th June 2020, closing at noon on Monday 6th July 2020. Additionally, the University posted information letters to the homes of staff on furlough, to ensure that they were aware of the survey invitations even if not accessing work emails: access information could be requested from Capita's freephone/email helpline. Alternative completion methods (paper self-completion or telephone interview) could also be requested. Personalised reminders (with URL and individual survey access code) were emailed to non-responders twice weekly.

Capita Surveys and Research processed and validated 2,211 completed survey questionnaires from University of Reading employees: this gives a response rate of 52% based on the 4,246 staff invited to participate. Staff employed at the University of Reading Malaysia were invited to take part in a similar survey, adapted to suit the local situation.

What is in this report

This RAG (Red, Amber, Green) report is designed to give an overview of the survey results at University level and by:

- Work 'location' during lockdown
- Academic School or Professional Service/Management
- Responsibility for staff
- Contracted hours
- Contract type
- Individual Academic Schools, Institutes and Professional Service departments
- Personal demographics /Equality Act Protected Characteristics.

Each question is listed in the order it appears in the survey. The figures given are the 'combined positive' i.e. the percentage of respondents who provided a positive response to the question. A higher result indicates a more positive response and a better outcome for the University.

Colour coding is used to identify whether a group has more positive or negative views than the University result.

Where a group is at least 10 percentage points worse than the University result, the
cell is coloured red.
Where a group is between 5 and 10 percentage points worse than the University
result, the cell is coloured amber.
Where a group is between 5 and 10 percentage points better than the University
result, the cell is coloured light green.
Where a group is at least 10 percentage points better than the University result, the
cell is coloured dark green.

At the top of the sheet is a count of the number of questions coded **red**, **amber**, **light green** and **dark green** for each group.

The RAG report is designed to aid local action planning by understanding whether different staff groups have indicated particular areas of strength and improvement of their own.

The report includes quantitative data only and not data from qualitative questions (free text questions).

Sub-set questions/statements are only asked of participants meeting certain criteria, usually giving specific response(s) to a previous question, and therefore are answered by a smaller number of participants. To ensure anonymity is maintained, some of the sub-set questions/statements are excluded from this analysis.

NOTE: Questions 14-21 are answered only by the 89% of staff expected to continue their usual roles from home during lockdown (as stated in Q1).

The neutral question 'What happened to your role during lockdown?' has been excluded from analysis.

Understanding the effect of rounding

Figures throughout this report are displayed as whole numbers for the ease of reading. To ensure the figures are as accurate as possible we apply rounding to the figures to the nearest percentage point. Sometimes this will mean that the figures shown may not be identical if calculations are performed using the figures displayed in the report, however any difference would not be larger than ± 1 percentage point.

Therefore, if you sum the percentages for all the response options to a question, the figure may not sum to 100% but may sum to 99% or 101%.

When combining the total positive responses, we first combine the number of responses and then calculate a combined percentage, rather than simply adding the two individual response percentages together.

In the example shown below, if we sum the displayed percentages for *agree* and *tend to agree* to calculate the percentage positive response it would be 70%, however, by using raw figures we calculate the result more accurately to 70.699% which is rounded up to 71%.

EXAMPLE:

	Agree	Tend to Agree	Tend to Disagree	Disagree	Total	Total Positive responses calculation
	(A)	(B)	(C)	(D)	A+B+C+D	A+B
Number of responses	667	882	455	187	2191	1,549
Percent of responses	30.443%	40.256%	20.767%	8.535%	100%	70.699% (this rounds up to 71%)
Rounds to	30%	40%	21%	9%	100%	70%

Work 'location' during lockdown, Role and Contract

The table below shows the 'combined positive' i.e. the percentage of respondents answering 'Agree' and 'Tend to Agree'.

Data columns show the University of Reading as a whole (excl. Malaysia) and then Work 'location' during lockdown; Academic School or Professional Service/Management; Responsibility for staff; Contracted hours; and Contract type. The coloured cells indicate a difference from the overall University score.

There may be variation up to 1% when compared to the Frequency Data report due to rounding.

Religion and Sexual Orientation

The table below shows the 'combined positive' i.e. the percentage of respondents answering 'Agree' and 'Tend to Agree'.

Data columns show the University of Reading as a whole (excl. Malaysia) and then religion/belief and sexual orientation. The coloured cells indicate a difference from the overall University score.
